

# EBC-Tracer

**Locate your own vehicle at any time of the day  
without monthly fees**

Every year, dozens of vehicles and machines disappear without a trace. Therefore, an efficient security system is a necessity rather than a nice gadget.

The **EBC-Tracer** combines GPS and GSM system in one compact module (85x65x25mm) and ensures that you can locate your vehicle at any time of the day through a simple phone call. By default we provide the system with a Pay & Go reload card worth 20 euros, so you don't have to pay any monthly subscription fees. Each year, the SIM card has to be recharged with an amount of 10 euros to extend the validity period, but this can be easily done via internet banking.

How does the EBC Tracer work exactly? You call with your mobile phone the phone number of the module. You will hear a busy tone and then the connection will automatically be disconnected (so you pay no connection fees). Within minutes you will receive an SMS message with the exact coordinates of where your vehicle is at that moment. Via Google Maps, you can convert the data to an address. You do not need to invest in expensive, complicated software, a mobile phone and a computer with Internet connection is sufficient.

## **The advantages at a glance:**

- Compact and easy to install system
- Active antennas so completely invisible security
- Localization at any time of the day (independent monitoring station)
- No expensive software
- No subscription fees
- Cost 1 Localization = 1 SMS message
- European approved

The **EBC Tracer** can be equipped with the following options:

### **1. Battery Monitoring**

By default, the system has an internal backup battery with a battery life of about one day. It is automatically recharged and maintained by the module, which is connected to a constant voltage. The "Battery Monitor" option ensures that you will be warned by text message, if potential thieves would disconnect the battery clips of your vehicle or machine.

### **2. External Battery**

It is possible to provide the module with an external battery with a higher autonomy. With a battery of 3,5 Ah , the module can function for about 3 days. A battery of 12 Ah ensures autonomy of about 10 days. In both cases, the module together with the battery is placed in a separate housing. We work with compact and durable lithium batteries to maintain the dimensions as small as possible. This option may be necessary for machines where the power automatically goes down after the ignition is switched off.

### **3. Alarm after contact**

The EBC Tracer can optionally be fitted with an additional alarm that can be turned on and off via a hidden switch or via SMS. When the engine is started when the alarm is activated, you will automatically receive a warning message on your mobile phone. That way you know immediately that an unauthorized person tampers with your vehicle.

### **4. Immobiliser/Anti-Sterter**

Any immobilizer can also be switched on and off via a hidden switch or via SMS. If the immobilizer is activated, a potential thief cannot start the engine. This option can also be combined with the additional alarm after contact.

### **5. Geozone**

The "Geozone" is an arbitrary area that can be programmed into the module once. If your vehicle is to move beyond this framework, you will be automatically notified via SMS. This option is ideal for machines that often remain unattended in a yard. If on a Friday night, the thieves move your machine, you will be warned at the time that they exceed the set limit. Otherwise (When no limit is set) the theft is only determined on the Monday that follows and there will be a lot of waste of time.

Since May 2009, the Track & Trace systems are for 120 % tax deductible. Newspaper articles below provide more information.

## **Fiscal stimulus for security vehicles**

Whoever protects his vehicles (bulldozers, trucks, trailers, buses, etc.), may now deduce his tax expenses for 120%. The measure is more important for contractors who use expensive equipment on construction sites.

The yard thefts have increased in recent years. In 2005 2.986 cases were registered in 2008, there was already 3,866.

Thanks to the new scheme, you can now include tracking systems (track and tracing systems for vehicles) and enjoy the increased investment.

If more safety systems are placed in the yard vehicles some facts can be prevented and the Police are more likely to find back the stolen vehicles.

The government took the action initiated by Interior Minister Guido De Padt and Finance Minister Didier Reynders. GVA: May 29, 2009

## **Increased deduction for securing company vehicles**

The Cabinet of the ministers has decided to increase Tax deductions on investment in the security of commercial vehicles such as bulldozers, trucks, trailers and buses. It is partly a response to the many yard thefts.

"The rules that apply to the investment are fully applicable to these investments. Above that some of the expenses qualify for the deduction of an immediate 120%" the Minister home affaires Guido De Padt and Finance Minister Didier Reynders say.

They also emphasize that the initiative is important for contractors who use expensive equipment on construction sites. In recent years, the number of thefts has indeed risen sharply. In 2005, just under 3,000 thefts were reported, while three years later, they were almost 4,000.

"Thanks to the new scheme now included in tracking systems (track and tracing systems for vehicles), you can enjoy the increased investment deduction. If more safety systems are placed on the yard vehicles, a number of facts are avoided and the police is more likely to find the stolen yard vehicles". HLN: May 29, 2009

With **EBC Tracer**, protect your vehicles or machines in a simple but effective way. We like to guarantee an excellent value for money. Prices below are unit prices in Euro excl. 21% VAT.

	1 piece	from 2 pcs	from 5 pcs	from 10 pcs
Module	379,00	375,00	360,00	355,00
Battery Monitoring	free	free	free	free
External Battery 3,5 Ah	35,00	35,00	35,00	35,00
